> **Looking for:** remote full-time or part-time roles (architect, tech lead, senior Java back-end, full-stack); project delivery, technical advisory, architecture and code review.

CORE STRENGTHS

- **Payments & settlement:** aggregated payment integration, channel adapters, multi-level agent profit-sharing, reconciliation, double-entry ledgers; persist-before-call, request-ID and ledger idempotency, real-time + scheduled MQ compensation.
- **Architecture:** microservices / DDD, one codebase deployable as a monolith or microservices, transactional outbox + RocketMQ, key trade-offs captured in written decision records (ADRs).
- **0→1 full-stack delivery:** Java / Spring Boot back ends, Vue 3 consoles and ECharts dashboards, Next.js sites, uni-app mini-programs and apps; several products delivered as the sole tech lead.
- **IoT & hardware:** access-control and security vendor OpenAPIs; Bluetooth / serial hex protocol parsing with offline recovery.
- **AI-assisted delivery:** Claude Code in daily work with spec-driven (SDD) and test-driven (TDD) development and automated validation gates.

EXPERIENCE

Software Architect · Henan Xinyan Electronic Technology

2026.06 — present

Leads the architecture of CiftoPay, an aggregated payment platform

- Owns the overall architecture: payment orchestration, channel adapters, double-entry ledger and daily reconciliation. Funds are settled directly by licensed payment institutions; the platform never holds them.
- Java 25 / Spring Boot 4 / Spring Cloud Alibaba / RocketMQ / MySQL / Redis; the same codebase runs as a monolith or as microservices.
- Three web portals in a Vue 3 monorepo (merchant / agent / operations), four uni-app x mobile apps and a public open API.
- Close to a hundred ADRs written so far; daily delivery with Claude Code + SDD / TDD.

Tech Lead · Henan Runzhen Technology

2022.02 — 2026.04

Smart community & campus IoT platform; food-safety smart weighing-scale app

- Built in phases since 2022; led the phase-3 rebuild (about 80% of phase-3 commits): overall architecture, plus assets and residents, fees and e-invoices, repairs, visitors, attendance; ~120k lines of Java.
- Designed a unified integration layer for Hikvision, Dahua ICC, Daoer parking and Baidu face recognition (three-level enablement and ID mapping), an event normalize-and-dispatch pipeline (Redis queue + WebSocket) and a strategy-based fee engine.
- At Runzhen, also built the food-safety weighing-scale app (uni-app 3, serial scale + multiple USB cameras: stability check, tare, batch acceptance) and the platform website (Next.js 16).
- Wrote pre-sales technical proposals, bid documents and deployment topologies for government and enterprise projects.

Freelance · Remote

2020.10 — 2022.02

Continued remote work on a payment acquiring platform

- Requirements, development and production support for an acquiring platform, working asynchronously through documentation.

Deputy Project Lead · Shanghai Qiuxiang Information Technology

2018.05 — 2020.10

A family of payment acquiring platforms

- Transactions, agent hierarchy, profit-sharing, reconciliation and settlement; led the profit-sharing and reconciliation engine with real-time + scheduled MQ compensation, handling million-level daily transactions.
- Led a team of 4–5 developers; core back-end design and code review.

Java Developer · Shanghai Shengxuan / Lewa and others

2013.11 — 2018.04

Aggregated payment app and consumer-finance apps

- Aggregated card, card-not-present and QR payments: led the profit-sharing and repayment refactor, risk interception, OCR and merchant onboarding modules; migrated scheduled jobs to XXL-Job.

SELECTED WORK

- **CiftoPay** `ciftopay.com` — aggregated payments and digital services for local merchants; architecture and full-stack development.
- **Ecommica** `deals.ecommica.com/en` — multilingual deals and coupon platform; Next.js 16 storefront, Spring Boot 3.5 affiliate-tracking service, Vue 3 admin.
- **ECP** (2026.04 – 2026.07, remote part-time contract, India) — overseas payment platform: pay-in via UPI / Net Banking, pay-out via UPI / IMPS / NEFT / RTGS. Architecture and full-stack development: signed, replay-protected open API, pay-in / pay-out state machines, multi-leg double-entry ledger with holds, settlement batches and reconciliation; Spring Cloud microservices with two Vue 3 consoles. Case study: `riverhub.top/work/ecp/`
- **Runzhen Smart Brain** — community & campus IoT platform: Hikvision / Dahua / Daoer integration layer, event pipeline, fee engine; admin console, mobile apps and live dashboard. Case study: `riverhub.top/work/runzhen/`

SKILLS

Back end	Java (since 2013), Spring Boot / Spring Cloud / Spring Cloud Alibaba, MySQL, Redis, RocketMQ, XXL-Job, Nacos
Front end / mobile	Vue 3, Next.js / React, Tailwind, ECharts, uni-app / uni-app x, React Native
Practices	Microservices / DDD, ADRs, Claude Code, SDD, TDD, Playwright, Git workflows and CI
Languages	Chinese (native), English (written)

EDUCATION

B.Eng. Computer Science & Technology · Zhengzhou University of Light Industry

2009 — 2013
