GitHub: github.com/shixiaohe996-droid

13 years in software engineering, with a focus on payment acquiring, profit-sharing, ledgers and reconciliation. Combines architecture and hands-on Java development with IoT integration and full-stack delivery, from business boundaries and data consistency to code review and handover.

Target roles: software architect, tech lead, senior Java or full-stack engineer. Open to remote full-time or part-time roles, project delivery and technical advisory.

Core strengths

- **Payments:** channel adapters, transaction state machines, agent profit-sharing, double-entry ledgers and reconciliation; request idempotency, transactional outbox and message compensation.
- **Architecture & delivery:** Java / Spring Boot / Cloud, monolith and microservice deployment, Vue consoles, Next.js sites and uni-app mobile clients; API documentation and decision records.
- **Integration & engineering:** vendor OpenAPIs, serial protocols and offline recovery; specifications, tests, review and automated checks for AI-assisted development.

Experience

Software Architect · Henan Xinyan Electronic Technology

Jun 2026 - present

CiftoPay aggregated payment platform · Architecture and full-stack development

- Lead payment orchestration, channel adapters, double-entry ledger and daily reconciliation. Licensed payment institutions settle funds directly; the platform does not hold funds.
- Build the platform on Java 25, Spring Boot 4, Spring Cloud Alibaba and RocketMQ; one codebase supports monolith and microservice deployment.
- Deliver merchant, agent and operations web portals in a Vue 3 monorepo, four uni-app x mobile apps and an open API. Maintain ADRs and use Claude Code with SDD / TDD in daily development.

Tech Lead · Henan Runzhen Technology

Feb 2022 - Apr 2026

Community & campus IoT platform; food-safety acceptance-scale app

- Led the phase-3 rebuild, architecture and core modules: assets, residents, fees and e-invoices, repairs, visitors and attendance.
- Designed a unified Hikvision, Dahua, Daoer and Baidu Face integration layer with configuration and ID mapping, a Redis queue / WebSocket event pipeline and a strategy-based fee engine.
- Built the scale app with serial readings, stability checks, tare, batch acceptance and multiple USB cameras, plus the Next.js website. Wrote technical proposals, bid documents and deployment designs.

Experience continued

Freelance · Remote

Oct 2020 - Feb 2022

Continued work on the Xinyin Huitong acquiring platform: requirements, development and production support, using documentation and asynchronous collaboration.

Deputy Project Lead · Shanghai Qiuxiang

May 2018 - Oct 2020

Payment acquiring platforms: Shan POS, Bang Zhanye and Xinyin Huitong

- Owned transactions, agent hierarchy, profit-sharing, reconciliation and settlement. Led the profit-sharing and reconciliation engine with real-time and scheduled MQ compensation, supporting million-level daily transactions.
- Led 4–5 developers, with responsibility for core back-end design and code review.

Java Developer · Shanghai Shengxuan / Lewa and others

Nov 2013 - Apr 2018

Built payment and consumer-finance products, including Kaola Changfu and Dai Ni Huan. Led profit-sharing and repayment refactoring, risk interception, OCR and merchant onboarding; migrated scheduled tasks to XXL-Job.

Selected projects

ECP · Architecture and full-stack development

Apr - Jul 2026

Remote part-time contract · Local payments in India

- Pay-in through UPI / Net Banking and pay-out through UPI / IMPS / NEFT / RTGS. Designed signed, replay-protected APIs, payment state machines and ledger idempotency.
- Implemented multi-leg double entry, balance holds, settlement batches and reconciliation, with Spring Cloud services and operations / merchant Vue consoles.

Case study (Chinese): riverhub.top/work/ecp/

Ecommica · Multilingual deals and affiliate tracking

Built the Next.js 16 storefront, Spring Boot 3.5 tracking service and Vue 3 admin. English and Chinese sites are live, with outbound click tracking, postback deduplication and click-ID attribution.
